

Problem: I can't log into my computer.

Solution: First determine what you are trying to log in to.

Novell Client: Make sure your name and password are correct. Make sure your tree says KFCS. Make sure your Context is set to your location (IMTC.KFCS). Make sure your Server is set to your location (DO_SERVER). Click on the advanced tab if your log in screen doesn't resemble the one on the right.

GroupWise: Make sure your name and password are correct. Check the caps lock button, as your password is case sensitive. Make sure the address is the post office of your location (dopo). The port number is always 1677.
